

Pauli Tikka has studied biotechnology at the University of Turku since 2011 and has been doing his Master's thesis under my supervision in Jena since last fall, 2013. I have been his supervisor from University, giving him academic instructions on writing etc.

I have come to know Pauli from his lab work I have instructed as a very efficient performer as well as very analytical one. He knows where the goal is and what is needed to achieve it.

During these lab works Pauli has achieved understanding of HTS screening, immunoassays, real-time PCR, device development as well as fermentation and downstreaming.

I can highly recommend Pauli as a PhD student. He is sure to be a highly motivated individual able to achieve the PhD goals in given time.

In Turku 6.3.2014
